

Sweep + IFVG

How we trade NQ every morning at 9:30 AM New York.

8 pages, 3 minutes.

The whole strategy

Wait for the sweep.

Enter on the IFVG.

Target the Open line.

No sweep, no trade. No IFVG, no trade.

1 The sweep

Price runs through the red box at the bottom. The stops under the low get taken.

Now we watch. Nothing else yet.

2 The IFVG

The drop left an FVG. A candle closes back up through it. That is the IFVG.

We enter long here. Not before.

3 Stop and targets

Stop below the sweep. First target: the Open line. There, move the stop to break-even.

Then the red box above. Then the grey box (DOL).

Shorts: the same, upside down

Price runs through the top box, prints an IFVG, we short.

Targets: the Open line, the bottom box, then the Target.

Risk

\$200 risk. \$200 target.

2 micros, 50 points.

2 trades a day, max.

Same size, same stop, same targets. Every day.

Watch it live
